

# Litigation Unbundling Results in Multi-million Dollar Settlements

## Services Provided

- Infringement analysis
- Source code analysis
- Evidence mining from technical literature

## Technology

- Network bandwidth management
- Software security and virtualization
- Software protection and anti-hacking

## Background

A successful plaintiff law firm in the US was representing multiple corporations in 14 patent lawsuits against Fortune 500 technology companies in the domains of networking, software security, and virtualization. To deliver the best possible outcome to its clients, the firm engaged with iRunway to leverage our tech-archeological capabilities. iRunway's technology skills complemented the firm's litigation model and served as an intelligent and inexpensive leverage for its lean litigation team.

## Insight Delivered

iRunway's capabilities around "technical archeology" regularly unearthed meaningful insight from overwhelming amounts of data. Delving deep into the defendant's source code consistently worked as a trump card.

- In a lawsuit against a Fortune 50 software company, the team analyzed over 50,000 pages of technical literature/ API references and found key infringement evidence. iRunway's declaration was successfully used during mediation to counter the defendant's non-infringement contentions.
- In another lawsuit in 'network bandwidth management' involving multiple defendants, our team mined crucial evidence from over 22 million lines of source code, helping the law firm prove infringement with ease.
- We reverse engineered a product workflow in software protection and anti-hacking in less than 10 days, providing the litigators with vital information to demonstrate infringement.

## Outcome

The law firm won multi-million dollar settlements for its clients – through world-class and aggressive lawyering, supported by iRunway's deep insights and technical evidence.
