

## 30 Million Lines of Source Code. Few Lines of Evidence

### Services Provided

- Infringement analysis
- Source code analysis
- Evidence mining from technical documents
- Expert witness support
- Deposition support

### Technology

- Contextual advertising software

### Background

The client of a leading New York-based law firm was involved in a patent litigation against other Fortune 500 companies in the domain of contextual search and advertising. Faced a vast database of information, the law firm engaged iRunway to do the technology heavy lifting and identify the best technical evidence of infringement from over 30 million lines of source code and technical documents.

### Insight Delivered

- iRunway worked with the lawyers to formulate the infringement theories from the technical documents produced. The team also helped the lawyers identify and request additional documents that corroborated with the infringement theory.
- Our consultants analyzed over 50 GB of source code and translated the technical aspects of the evidence found in the source code into a language that lawyers understood – establishing patterns and identifying critical similarity and distinctions with the infringement theory.
- Our team brought the expert up to speed with evidence gathered from source code and helped prepare the expert reports.
- During depositions, our consultants worked with attorneys to frame the relevant technical questions and provided real-time insights on any deviations in defendant's testimony, based on knowledge from the source code and other technical aspects of the case.

### Outcome

Armed with technical insights and strong infringement evidence, the law firm was able to drive this case to a favorable, multi-million dollar settlement for its client.
